787-9809

Grand Coulee Dam Area

- **Delano Regional Transfer Station**
22151 Alcan Rd NE
633-0100

WHERE TO RECYCLE?

Other Grant County Locations:

- **Coulee City Drop Box**
325 W Arch
754-6082
- **Mattawa Drop Box**
25991 Hwy 243 S
754-6082

There is a 5 gallon maximum limit allowed at all collection sites.

These locations are for waste oil that is not contaminated with another substance. Keep antifreeze, brake fluid, and gasoline out of your oil.

Use a durable container to store used motor oil. Keep it closed except when pouring oil in.

Grant County Solid Waste

124 Enterprise St. SE
Ephrata, WA 98823
509-754-6082 ext. 3508

Paid in part by a grant from the Washington State Department of Ecology Local Solid Waste Financial Assistance

Printed on 30% post-consumer recycled paper

WHAT DO I DO WITH . . .

USED MOTOR OIL?

Grant County Solid Waste

THE USED OIL PROBLEM

One pint of oil can produce a slick approximately one acre of water.

Used oil may contain toxic chemicals which are harmful to the environment and public health.

Discarding oil wastes a valuable resource.

Improper disposal of oil directly on the ground, down a storm drain, or in the trash threatens the quality of our water and environment.

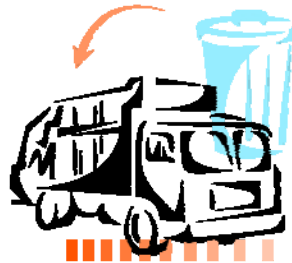

What do I do with used oil contaminated with antifreeze, gasoline, or brake fluid?

Never mix used oil with anything else such as antifreeze or gasoline. If waste oil is mixed with another substance, it must be managed as a hazardous waste.

If used oil is contaminated with antifreeze, gasoline, or brake fluid, it must be taken to a household hazardous waste collection event if generated by a household.

Household hazardous waste collection events are typically held in the spring and fall. For more information about household hazardous waste collection events, call 509-754-6082 ext. 3508.

WHAT TO DO WITH USED MOTOR OIL

NO! Waste oil that is disposed of in landfills or is dumped on the ground may seep into the groundwater, which may contaminate wells or surface water.

NO! When dumped into storm drains or gutters, oil may be carried to lakes, wetlands, or groundwater.

NO! Using waste oil to control dust on roads or allowing a car to leak oil poses a threat to the environment. Oil can seep into groundwater or be carried by rain or snowmelt as runoff into our lakes and rivers.

YES! RECYCLE USED OIL!! Remember that used oil is a valuable resource. It may be recycled at any location listed on the other side of this brochure.

WHY RECYCLE???

RECYCLE

It takes 42 gallons of crude oil to produce 2.5 quarts of new lubricating oil. Just one gallon of used oil can be re-refined into the same 2.5 quarts. Oil never wears out.

Used motor oil may also be used in asphalt plants, industrial boilers, utility boilers, steel mills, and specially designed space heaters used in garage bays and municipal garages.

Recycling used oil significantly reduces the amount of oil which reaches Grant County's ground and surface water.

HOW TO RECYCLE

Always drain oil into a drip pan or other suitable container. Store the oil in an unbreakable container, seal it, and label it "Used Oil." Store the container out of the weather so that the container doesn't break down.

Never mix used oil with anything else such as antifreeze or gasoline.

Take uncontaminated used motor oil to a location listed on back of this brochure.

- Store used oil in a durable plastic container.
- Keep it covered and out of the weather.
- Do not mix any other materials with the used oil.
